

Virtual Care System

Alarmex, Inc. is pleased to introduce its breakthrough Virtual Care System designed to offer peace-of-mind to those who are concerned about the safety and security of family members living alone.

This wireless, web-based monitoring technology gives individuals who might otherwise need institutional or on-site supervision the ability to live alone without compromising their well-being or incurring significant costs for institutional care.

Alarmex, Inc. specializes in Fire & Security system installation, service, and monitoring. In addition to the Virtual Care System, Alarmex offers many other reliable services, including the following:

Protection While At Home

Personal Emergency Reporting System

Designed for medical alert applications, this tabletop or wall-mount console, coupled with a portable transmitter worn as a bracelet or pendant, provides push-button emergency assistance to quickly get you the help you need.

Protection Away from Home

MyPersonna

Utilizing the latest technology, Alarmex Inc.'s MyPersonna, a mobile, hand-held Personal Emergency Reporting Device, improves safety and security for the mobile lifestyle. Unlike with other GPS devices, customers using MyPersonna will have an operator standing by at all times, as well as a built-in panic button, and push-button access to three customized, pre-programmed phone numbers.

**VIRTUAL
CARE SYSTEM**

Get the peace of mind that can only be achieved by providing the safety & security your loved ones deserve without compromising their independence.

ALARMEX, INC.

Security without sacrifice

We are all living longer, but sometimes we need assistance. Assisted living facilities are expensive and some of our elderly family members simply want to continue an independent lifestyle. With our Virtual Care System we can have the best of both worlds.

Gain security without sacrificing independence

Our state-of-the-art technology enables you to “check-in” on your loved one without ever compromising their privacy or independence. By doing so, this non-invasive system extends the time individuals can remain in their homes and reduces the financial, emotional and physical toll placed on caregivers.

The Virtual Care System is a cost-effective, home-based monitoring solution that enables seniors and disabled individuals to live independently at home while staying “virtually” connected to loved ones and/or professional care providers.

Reliable technology

The system design is simple and reliable. An Alarmex, Inc. representative will walk through the premises with the customer to determine locations throughout the home that record “high-activity” on a daily basis. Such locations may include the kitchen, master bedroom, and medicine cabinet. Sensors will then be installed in these locations. If the sensors installed in these areas are not “tripped” during pre-established time schedules, an automatic email and/or text message will transmit to concerned individuals.

In addition to these alert messages, subscribers can log-in remotely to check on real-time activity, as well as use live video to assist in determining the urgency of any notification or simply to look in and make certain all is well with loved ones.

Remote Access

Remotely log-in via our secured web or PDA interface to check on real-time activity.

Email or cell phone alerts

Upon detecting an activity or inactivity outside of the resident’s normal daily pattern, a notification is transmitted via email and/or text message.

Optional Video Monitoring

Live feed or event-triggered recording is available to capture video of relevant activity.

Peace-of-mind

Get the peace-of-mind you and your loved ones deserve. Call Alarmex, Inc. today and discover how easy it is to put the Virtual Care System to work for you. A caring professional will listen to your unique needs, answer any questions, and schedule an appointment for an in-home consultation.
