

Alarmex, Inc. Launches Remote Video Monitoring Solution - Topsfield, MA November 26, 2008

Alarmex, Inc. recently announced the launch of Alarmex, Inc. Video, its new remote video monitoring solution.

Alarmex, Inc.'s solution gives users the ability to look at what's happening in and around their homes and businesses from anywhere, via their cell phones, PDAs and personal computers. Customers can log into their Alarmex, Inc. Video accounts remotely to see live video from one or more cameras, and play back video that was automatically recorded when motion activity was detected.

Alarmex, Inc. Video is fully integrated with its suite of interactive security and monitoring services, enabling customers to access a single view showing their daily security system events, such as a door opening or system disarming, and the recorded video clips that correspond to those events.

Plus, if the customer's security system reports an alarm, the Alarmex, Inc. Video cameras can be configured to automatically record pre-alarm and post-alarm video footage and store it offsite where it can be reviewed immediately by the property owner to see what happened.

Users can also sign up for automatic notifications when new video clips have been recorded. These video notifications can be sent via e-mail or text message, and can even include the recorded video clip as an attachment. Through an easy to use web interface, customers control the types of events that trigger automatic recording and alerts.

The Alarmex, Inc. Video solution is enabled by Alarmex' new video equipment platform, which includes several models of standalone IP cameras along with an IP video server that makes most analog security cameras compatible with the Alarmex' Video Services.

Unlike other video monitoring services, Alarmex, Inc.'s Video does not require a local storage device, such as a DVR or personal computer, at the monitored property -- all video is stored securely offsite in the Alarmex, Inc. Operations Center.

Alarmex, Inc.'s Video Solution is ideal for traditional security applications, such as capturing footage of a burglary or vandalism, but it's also designed for a number of less threatening, everyday applications.

Residential customers can use Alarmex, Inc. Video to keep an eye on children, pets, driveways, swimming pools and other sensitive areas while they're at work or traveling. People with second homes or other remote properties can use Alarmex, Inc. Video to see what's happening while they're away. And commercial users can log in from anywhere to see if their businesses were opened and closed on time, monitor customer traffic throughout the day and visually confirm that everything is business as usual.

Call Alarmex, Inc. at 800-696-8872 for more information or to request a system demonstration.
